

Prompt patterns for production vis — activating venues, controlling lighting, rigging, CAD conversion, and exhibition stands. Platform: relook.hthsystems.com.au

SYDNEY PRODUCTION — EDDIE

Master Prompt 1 — Venue Photo → Live Event Activation

Real Site Photo → Fully Activated Production (Eddie's Primary Workflow)

Image 1 = Real venue photo — empty room, rehearsal, or bump-in state (STRUCTURE MASTER)

"Show this as a fully live event — packed audience in the seats, [LED screens playing the live conference content], [production lighting at full with warm stage wash and cool front lighting], atmospheric depth — make it look exactly as it will on show day."

Iterate the audience: V1 = empty (show the space) → V2 = partially filled (pre-show) → V3 = full audience (peak event). | **Screen content:** [speaker close-up / branding slide / abstract graphic / livestream overlay] — describe exactly what's on screen; the AI renders it.

Audience & Crowd Control

FILL EMPTY VENUE

"Add a **full engaged audience in business attire** filling all seats — realistic, varied, no repetition"

REMOVE AUDIENCE

"Remove all audience — show **clean empty venue with all equipment in place**"

PRE-SHOW ARRIVAL

"Show guests **arriving and finding seats** — 40-60% full, informal energy, house lights up"

CORPORATE CROWD

"**Professional attendees in business smart casual** — seated, some taking notes, engaged with the stage"

LED Screens & Stage Content

CHANGE SCREEN CONTENT

"Change the LED screens to show **[client logo / abstract brand graphic / speaker close-up / livestream layout]**"

STAGE DRESSING SWAP

"Change stage set to **[minimal black drape / branded backdrop / illuminated set pieces]** — keep LED positions"

ADD / RESIZE SCREENS

"Add **[centre LED wall / flanking IMAG screens / LED backdrop]** behind the stage matching existing scale"

PRODUCTION LIGHTING ON

"**Full production lighting on** — front wash, warm key on stage, atmospheric haze, coloured accents from truss"

Exhibition Viz — Car Stand Renders

CAR STAND MASTER

"Create a **hyper-realistic exhibition render**. **LOCK Image 1 exactly** — do not change stand layout, car positions, or composition. Vehicles: real production models — **[Polestar 2 / 3 / 4]** at exact positions."

FLOOR RULE (HARD)

"Floor platform: **max 20mm height, visually flush** with hall floor. White glossy, soft reflections, thin metallic edge. If it looks raised — incorrect."

SUSPENDED LIGHTBOX

"Add a **suspended [CLIENT] lightbox** — **black structure, white illuminated logo, even glow** — centred above the vehicles at the position shown"

HALL ATMOSPHERE

"Large modern exhibition hall, clean architecture, HDRI lighting. **Black spot fixtures, warm-neutral white, medium atmospheric haze** for visible beams."

MELBOURNE PRODUCTION — PAUL'S MASTER PROMPTS

Master Prompt 2 — Sketch Inpaint: Light Beams (Actual Prompts Used)

Draw pink arrows on CAD/venue plan → generate beams at exact positions

Basic beams: "Generate a light beam where the pink arrows are"

Controlled zones:

"Generate light beams where the pink arrows are to illuminate the green grid on the floor, avoid the light to go beyond the green line boundary — remove the pink and green lines/ scribes"

Pink = where beams land | **Green** = boundary / zone limit. Always add "remove the pink and green lines" for a clean output. Use **Premium 2K + Enhancer Ready** for client renders. Input: Vectorworks CAD ISO export or annotated venue photo.

Lighting Effects

SPOTLIGHT ARRAY

"Add **[warm white / cool white / coloured] spotlight beams** from each fixture on the truss, angled at the **[stage / display / cars]**"

FLOOR TREATMENT

"Change floor to **[polished concrete / branded vinyl / black dance floor]** within the marked area"

ATMOSPHERIC HAZE

"Add **atmospheric haze** to make light beams visible, with **[subtle / dramatic]** effect"

STAGE PRODUCTION

"Show set with **[full production lighting, backline, and LED backdrop]** as it would look during the event"

Rigging & Truss

TRUSS FINISH SWAP

"Change all truss from **[silver / black]** to **[black HD34 / silver HD44 / white powder-coated]**"

DRAPING & SOFT GOODS

"Add **[black draping / star cloth / scrim]** hanging from the truss between the marked points"

ADD RIGGING

"Add **[chain motors / truss totems / ground support towers]** to the marked positions in the sketch"

FLYING ELEMENTS

"Add a **[LED screen / banner / signage panel]** suspended from the truss at the position shown"

CAD ↔ Realistic Conversion (Vectorworks)

CAD → REALISTIC RENDER

"Generate a **photorealistic render** of this technical drawing with **[lighting effects, materials, and atmosphere]**"

Upload Vectorworks ISO or plan view — AI adds realism

SIDE / SECTION VIEW

"Generate a **2D side elevation** from this image showing **[truss heights, trim heights, and fixture positions]**"

Client-facing section views from 3D exports

PHOTO → TECHNICAL DRAWING

"Generate a **2D front elevation technical drawing** from this photo with dimensions and annotations"

Turn site photos into clean elevation views

ISO VIEW ENHANCEMENT

"Take this ISO view and add **[realistic flooring, ambient lighting, and atmospheric depth]**"

Turn flat Vectorworks ISO export into presentation visual

Power Tips

- 1 **Pink arrows are your prompt.** Draw them on any plan — "generate a light beam where the pink arrows are" is the actual working prompt.

3 **Colour-code your sketches.** Pink = where things go. Green = boundary/zone. The AI reads both colour and position.

5 **Say "remove the sketch marks"** in your prompt to get a clean final output without overlay lines.
- 2 **Iterate the crowd.** V1 = empty → V2 = 50% full → V3 = packed. Each builds on the last — don't re-upload the original.

4 **Describe what's on screen.** "LED screens playing a speaker close-up" beats "screens on" — the AI renders the content you describe.

6 **Premium 2K + Enhancer Ready** for all client-facing renders. Fast model for quick internal checks only.
