

ReLook Prompt Cheat Sheet

Melbourne Custom Build & Custom Upgrades

Proven prompt patterns for architectural builds and exhibition stands. Copy these, swap the specifics, and generate. Platform: relook.hthsystems.com.au

Materials & Finishes

METAL FINISH SWAP

"Change all the metal finishing (background and base object) to **[black metal matte / brushed gold / polished chrome]**"
Actual prompt from VRC champagne tower revision

GLASS & TRANSPARENCY

"Change the windows to **[tinted glass / frosted glass / clear glass with reflections]**"
For pavilion facades, office partitions, display cases

SURFACE MATERIAL

"Replace the **[timber / concrete / render]** surfaces with **[marble / exposed brick / white plaster]**"
Works on: walls, floors, countertops, facade panels

CLADDING SWAP

"Change the exterior cladding from **[dark panels]** to **[white aluminium composite / timber battens / corrugated metal]**"
Used for the AFL September Club facade revision

Structural Changes (Sketch Inpaint Mode)

HEIGHT ADJUSTMENT

"Raise the height of the **[curved wall / partition / bar counter]** as per the pink sketch"
Draw a pink overlay showing desired height — AI interprets it

REMOVE ELEMENT

"Remove the **[column / barrier / signage]** in the marked area and fill with the surrounding material"
Paint over what you want removed, prompt tells AI what to replace with

ADD ARCHITECTURAL ELEMENT

"Add a **[canopy / awning / rooftop terrace]** to the area marked in the sketch"
Sketch the rough shape + position, prompt describes what it should be

EXTEND / WIDEN

"Extend the **[balcony / bar top / facade panel]** to the width shown in the sketch"
Draw the new boundary and the AI fills in consistently

CAD ↔ Realistic Conversion

PHOTO → 2D CAD DRAWING

"Generate a **2D front elevation CAD view** from this image, with dimensions, material annotations, and construction notes"
Turns a photo of a finished build into a technical elevation drawing

SIDE ELEVATION

"Generate a **2D side elevation CAD view** from this image showing structural framing and cladding details"
Specify which side: left, right, or rear elevation

CAD → REALISTIC RENDER

"Generate a **photorealistic render** of this CAD drawing with **[material finishes, lighting, and landscaping]**"
Upload a sketch or CAD elevation as reference — AI creates the realistic scene

INTERIOR FROM FLOORPLAN

"Generate a **realistic interior view** from this floorplan with **[plaster walls, timber accents, pendant lighting]**"
Use AI Enhancer Ready for best results on interior renders

Element Swapping (Multi-Reference Mode)

FURNITURE FROM REF

"Change the stools of the 1st pic with the stool in the 2nd pic"
Upload venue photo + product photo as references

STAND RE-SKINNING

"Keep the same booth structure but rebrand for **[client name]** using the colours and logo from reference 2"
Same shell, new client — instant pitch visual

Power Tips

- 1

Sketch inpaint = structural. Changing shape or position? Draw it. Changing colour or material? Just type it.
- 2

Material names matter. "Black metal matte" beats "dark metal." "Brushed brass" beats "gold." Be precise.
- 3

CAD prompts: specify the view. "Front elevation", "side elevation", "section view" — the more specific, the better the output.
- 4

Premium 2K for client-facing. Fast model for quick explorations. Premium for anything going into a proposal or tender.
- 5

Multi-ref = composition. Ref 1 is your base scene. Refs 2-5 are elements you want placed into it.
- 6

AI Enhancer Ready auto-expands your prompt with pro photography terms. Great for realistic renders from CAD.
