

Prompt patterns for hyper-realistic exhibition renders. Upload concept layout + lighting plan + venue HDRI. Platform: relook.hthsystems.com.au

Master Prompt 1 — Hyper-Realistic Exhibition Render

Polestar Exhibition — Full Master Prompt

Image 1

 = Concept layout (MASTER — preserved exactly)

Image 2

 = Lighting plan

Image 3

 = HDRI hall reference

Create a hyper-realistic Polestar exhibition render.

ABSOLUTE MASTER LOCK: Image 1 defines everything. Do not change, move, scale, or redesign: stand layout, car positions, camera angle, signage placement, overall composition.

VEHICLES: Real production models only — Polestar 2, 3, 4. Exact positions, realistic proportions.

FLOOR (HARD RULE): Max 20mm height. Visually flush with surrounding floor. White glossy surface, soft reflections, thin metallic edge trim. Subtle shadow line only. looks raised incorrect. If it

NO ADDITIONS: No furniture, barriers, props, extra signage, or decorations. Keep minimal.

LIGHTING: Black minimal architectural fittings. Warm-neutral white spotlights. Medium atmospheric haze for visible beams. Soft beam falloff.

LIGHTBOX: Suspended Polestar lightbox — black structure, white logo, even illumination. Must remain.

PEOPLE: Walking naturally. Some crossing stand seamlessly (no step). Neutral modern clothing. Don't overcrowd.

ENVIRONMENT: Large modern exhibition hall. Clean architecture. HDRI-style lighting. Slight cool tone.

CAMERA REALISM: Natural lens behaviour, soft highlights, micro-contrast, realistic depth, clean gradients. No stylisation.

Master Prompt 2 — Reusable Exhibition Template

Any Client — Swap the [Bracketed] Values

A photorealistic architectural visualization of an exhibition stand inside a busy convention center.

STRUCTURAL BASIS: Booth structure (overhead trussing + fixture placement) must follow the technical design in

[YOUR INPUT IMAGE]

.

CENTERPIECE: Replace

[PLACEHOLDER]

 with a detailed 3D model of

[CLIENT PRODUCT]

 — e.g. a silver Leapmotor C11 electric SUV.

FLOORING: Floor area under truss:

[DESCRIBE FLOOR]

 — e.g. raised high-gloss white plinth with integrated LED strip lighting.

BRANDING: Large backwalls + reception counter with illuminated logos for

[CLIENT NAME]

 and text for

[EVENT NAME]

.

ATMOSPHERE & LIGHTING: Mood =

[DESCRIBE MOOD]

. Fixtures active, casting bright light on product. Accent palette:

[COLOUR CHOICE]

 — e.g. electric blue and cool white.

ENVIRONMENT: Diverse business professionals in suits/smart casual interacting with space. Background: realistic, slightly blurred exhibition hall with distant booths.

Quick Modifiers — Add to Either Prompt

SWAP PRODUCT

"Replace [car/product] with a

[specific model name and colour]

"

Works for any brand — Zeekr 001, Leapmotor C11, etc.

CHANGE FLOOR

"Change floor to

[black glossy / branded vinyl / timber deck]

, keep flush 20mm height"

Always re-state the 20mm rule when changing floor

ADJUST LIGHTING

"Change lighting colour to

[cool white / warm amber / brand blue]

 with

[subtle / dramatic]

 haze"

Specify beam colour + haze level for best results

ADD BRANDING

"Add illuminated

[CLIENT]

 logo on the

[backwall / lightbox / reception counter]

"

Specify position and whether the logo is backlit or surface-mounted

Fail Conditions — Check Every Render

FLOOR CHECK

Floor appears raised or looks like a stage — any visible step =

fail

Most common error. Always check floor edge first.

VEHICLE CHECK

Cars are not recognisable real models — generic or altered designs =

fail

Must be identifiable production models

LIGHTBOX CHECK

Suspended lightbox is missing, moved, or restyled =

fail

Must match position and style from concept

ADDITION CHECK

Extra elements added (furniture, barriers, props) =

fail

Scene must remain minimal unless explicitly requested

Power Tips

- 1

3-image combo is key. Don't skip images.

Concept + lighting plan + venue HDRI = the best results.
- 2

Lock structure first. Always state "Image 1 defines everything" — prevents the AI from reinterpreting your layout.
- 3

State fail conditions. Explicitly listing what's wrong helps the AI avoid common mistakes.
- 4

Premium 2K for client-facing. Fast model for quick internal checks. Premium for anything going into a production pack.
- 5

Iterate, don't restart. V1 gets the structure. V2 refines lighting and materials. V3 nails the atmosphere.
- 6

Swap brands fast. Same prompt, different product + logo + colours = new client render in seconds.
